

AI works when people feel capable, not replaced.

I help mission-driven teams adopt AI as a human process, with judgment, plain talk, and a human review step built into every workflow.

What I have built and shipped

Each one I scoped, built, and handed off, end to end.

Referral Finder **LIVE WEB APP**

PUBLIC HEALTH

160+ providers · ~15 plans standardized · \$0 new software
Cleans, merges, and analyzes provider data into one searchable, filterable directory, with a coverage check before any referral.

Intake & clinician dashboards **CONNECTED TOOL**

SOCIAL SERVICES

3 channels merged · calendar booking · supervisor view
Links the Referral Finder to clinicians, who email clients and book free consults while sheets update themselves; each caseload rolls into one supervisor dashboard.

Post-discharge follow-up **CLAUDE PROTOTYPE**

SOCIAL SERVICES

6 root-cause categories · risk-timed · role-based view
I mapped why high-risk follow-ups were missed, then built a Claude prototype that turns my fixes into a closed-loop dashboard.

AI Creative Skills Academy **TEACHING**

EDUCATION

Free, Adobe-sponsored · student, then instructor
Took the program, then taught it: AI and digital-marketing workflows for lower-income students, in plain language, at no cost.

Why I fit Claude Corps

- AI Fluency and Claude 101 completed
- Less than 2 years professional experience
- My own project manager: I scope, set the deadline, and own the outcome
- **Lean Six Sigma** Yellow Belt
- **BS Healthcare Administration**, in progress
- Energized by ambiguity, tight budgets, and HIPAA limits
- Comfortable teaching and translating AI for non-technical rooms

Built to outlast me

The hard part of any tool is what happens after the builder leaves. Everything I built at Femme & Them was made to keep running without me.

- A plain-language runbook for every system, so a non-technical owner can keep it going
- A named owner who inherits it, with the handoff walked through in person
- An annual review built in: the referral tool emails the owner each January to re-verify the directory
- A written fallback plan for when something breaks: what to check first, who to call, and how to keep the work going by hand until it is fixed

How I protect trust during change

- Explain the why before the how
- Give people a real say in the pace
- Make "I don't get this yet" safe to say
- Pair every new tool with a person to ask
- Let the people using it shape it

What I could help nonprofits do

- AI adoption strategy
- Workflow design with human oversight
- Staff reskilling and training
- Responsible-use guardrails
- Change management that sticks

Proof, at a glance

- ✓ Live referral directory of 160+ affirming providers, in daily use
- ✓ 3 intake channels merged into one reviewed pipeline
- ✓ Per-clinician dashboards rolled up to one supervisor view
- ✓ Closed-loop post-discharge follow-up prototype, built with Claude
- ✓ Taught AI and marketing workflows to lower-income students (free)
- ✓ Supported 150+ students through a college retention program
- ✓ Shipped under real HIPAA limits and a \$0 new-software budget
- ✓ Plain talk, no jargon, and I read whether it lands
