

Damien Homiak

Operations Support for Therapy Practices

Intake · Scheduling · Referrals
Client communication · Operations support

Spending your evenings on admin instead of with clients?

I help therapy practices run intake, scheduling, referrals, and client communication, and build the systems behind them, so the work stops living in your head and your inbox stops running your week. You focus on clinical care and steady growth. I handle the operations.

"Damien operates as external executive functioning for our team. They bring clarity where there's complexity, structure where there's ambiguity, and momentum where things might otherwise stall. They don't just plan or advise; they make things happen."

Cappy Shapiro · Clinical Manager, Femme & Them, PLLC

SIGNS YOUR PRACTICE IS OUTGROWING ITS SYSTEMS

- The inbox never quite reaches zero
- Referrals slip through the cracks
- New clients wait days for a callback
- Clinicians keep asking you the same questions
- Key processes live in one person's head
- Growth feels chaotic instead of planned

WHAT CHANGES WHEN WE WORK TOGETHER

Referrals scattered everywhere → **one place to track every referral**

You answer every question → **documented systems your team follows**

Missed or late follow-ups → **consistent, timely client communication**

Daily bottlenecks → **workflows that run without you**

Administrative chaos has a price. Every missed callback or dropped referral is a client who never gets scheduled, and every hour on spreadsheets is an hour you are not with clients. Good systems protect your revenue, your clients' experience, and your own energy.

WHAT I HELP WITH

- Intake & scheduling workflows
- Referral management & tracking
- Client communication & follow-up
- Insurance verification & benefits
- SOPs & documentation
- A private dashboard per clinician
- HIPAA-aware systems
- Onboarding & team training

HOW WE'D START

1 Review

A free 30-minute call to map your intake, referrals, scheduling, and the pain points slowing you down.

2 Plan

A short written plan: what to fix first, in what order, and why it matters.

3 Build

I set up the systems and documentation, then train your team so it sticks.

PROOF IT WORKS

- Built a referral tool covering **160+** providers, filterable by accepted insurance, with **\$0** new software.
- Merged **3** intake channels into one pipeline, each clinician seeing only their own caseload.
- Designed closed-loop follow-up so high-risk clients do not fall through.

WHY THERAPY PRACTICES

- Ran day-to-day operations for a **10+ clinician** behavioral health practice.
- Trauma-informed change management: new systems introduced without destabilizing your clinicians or clients.
- HIPAA-aware by default. Lean Six Sigma trained.

GOOD FIT FOR

- Group practices outgrowing their systems
- Solo owners drowning in admin
- Practices scaling clinicians or locations
- Teams with no one owning operations

FREE 30-MINUTE PRACTICE OPERATIONS REVIEW

We'll talk through intake, referrals, scheduling, and client communication, and find where time and revenue are leaking.

You'll leave with at least 3 practical recommendations, whether we work together or not.
